The Population Ecology of Interest Representation Virginia Gray,David

Lowery,1996 This examination of lobbying communities explores how interest group populations are constructed and how they influence politics and public policy By examining how populations of interest groups are comprised this work fills an important gap between existing theories of the origins of individual interest groups and studies of interest group influence The population ecology model of interest communities developed here builds on insights first developed in population biology and later employed by organizational ecologists The model s central premise is that it is the environmental forces confronting interest organizations that most directly shape the contours of interest populations After examining the demography of interest organizations in the fifty American states the population ecology model is used to account for variations in the density and diversity of their interest communities the nature of competition among similar interest organizations to establish viable niches and the impact of alternative configurations of interest communities on the legislative process and the policies it produces These empirical findings suggest that the environment of interest communities is highly constraining limiting their size composition and potential impact on politics Virginia Gray is Professor of Political Science University of Minnesota David Lowery is Burton Craige Professor of Political Science University of North Carolina at Chapel Hill

Statistics Explained Perry R. Hinton, 2024-10-31 Statistics Explained now in its fully revised Fourth Edition is for students and researchers who wish to understand the statistical analyses used to analyse quantitative numerical research data in a wide range of academic disciplines in particular the behavioural human and social sciences This book explains in a clear and informative manner the logic of statistical analysis in particular the null hypothesis significance testing NHST method Using this method a range of statistical tests have been devised for different types of data Each of these tests is explained in the book by adopting a step by step walkthrough approach with a specific illustrative example Crucially these explanations do not require the reader to have an advanced knowledge of mathematics or statistics but only assumes the basic mathematics which most readers will have learnt at high school The book also examines the criticisms of NHST and introduces the reader to Bayesian statistics As a result the reader will be able to critically evaluate the outcomes of statistical analysis both of their own work and that of others Statistics Explains will be of great interest to students and researchers in the behavioural human and social sciences in understanding both the outcomes of their own research and also the research reports in the academic journals

Nonparametric Statistics for Applied Research Jared A. Linebach, Brian P. Tesch, Lea M. Kovacsiss, 2013-11-19 Non parametric methods are widely used for studying populations that take on a ranked order such as movie reviews receiving one to four stars The use of non parametric methods may be necessary when data have a ranking but no clear numerical interpretation such as when assessing preferences In terms of levels of measurement non parametric methods result in ordinal data As non parametric methods make fewer assumptions their applicability is much wider than the corresponding parametric methods In particular they may be applied in situations where less is known about the application in question Also due to the reliance on fewer assumptions non parametric methods are more robust Non parametric methods have many popular applications and are widely used in research in the fields of the behavioral sciences and biomedicine This is a textbook on non parametric statistics for applied research The authors propose to use a realistic yet mostly fictional situation and series of dialogues to illustrate in detail the statistical processes required to complete data analysis This book draws on a readers existing elementary knowledge of statistical analyses to broaden his her research capabilities The material within the book is covered in such a way that someone with a very limited knowledge of statistics would be able to read and understand the concepts detailed in the text The real world scenario to be presented involves a multidisciplinary team of behavioral medical crime analysis and policy analysis professionals work together to answer specific empirical questions regarding real world applied problems The reader is introduced to the team and the data set and through the course of the text follows the team as they progress through the decision making process of narrowing the data and the research questions to answer the applied problem In this way abstract statistical concepts are translated into concrete and specific language This text uses one data set from which all examples are taken This is radically different from other statistics books which provide a varied array of examples and data sets Using only one data set facilitates reader
