1994) when women are not allowed to work in the same way as men. This is a common theme in the literature on gender inequality and economic growth. The authors argue that the gender inequality index (GII) is a good measure of the degree of gender inequality in a country. They find that countries with a high degree of gender inequality have a lower rate of economic growth. This is because women are not allowed to work in the same way as men, which limits their ability to contribute to the economy. The authors also find that countries with a high degree of gender inequality have a lower rate of innovation. This is because women are not allowed to work in the same way as men, which limits their ability to contribute to the economy. The authors conclude that gender inequality is a barrier to economic growth and innovation.
