

Well-Child Visits

It is important for all children to attend well-child visits and receive scheduled vaccines during the COVID-19 pandemic. Vaccines prevent measles, mumps, polio, hepatitis and other preventable viral infections. These services are especially important for newborns and children under the age of two.

Newborn visits check important things like:

- Your baby's weight
- Your baby's feeding
- Jaundice

Visits at 2, 4, 6, 9, 12, 15, 18 and 24 months are important to:

- Check physical growth
- Check brain growth
- Track milestones
- Get vaccinations
- Screen for lead in blood

To ensure access to care during the COVID-19 pandemic, Healthy Connections Medicaid is covering well-child visits and screenings through telehealth for Medicaid members. However, the South Carolina Department of Health and Human Services supports the American Academy of Pediatrics' (AAP) recommendation that well-child visits for children under age two receive in-person care, when possible.

Visits for children older than two years of age:

- Should be held according to schedule
- May be completed through telehealth, check with your pediatrician
- If you use telehealth, a follow-up, in-person visit and any vaccination should be scheduled as soon as possible
- Four and 11-year olds should still receive important vaccines, even if the well-visit is held via telehealth

Many South Carolina pediatric offices have made changes to protect patients and families including:

- Shifting timing for well and sick visits
- Changing the office design or location depending on the type of visit
- Allowing curbside visits for certain services
- Offering well-care visits through telehealth

Well Child Care Guidelines

Well Child Care Guidelines:

Well Child Care in Infancy: Promoting Readiness for Life William B. Pittard III, 2013-12-18 Well child care is designed to promote optimal health status for children including school and life success This preventive care includes anticipatory guidance continuity of care assessment of growth and development screening procedures for vision hearing dental and cognitive development and immunizations Anticipatory guidance provides parental health education counseling and reassurance The vast majority of Medicaid insured children receive fewer than the American Academy of Pediatrics AAP recommended number of well child visits in the preschool years and a disproportionate number of children have poor health and lack school readiness With little empirical data available indicating clinical effectiveness other than for immunizations the AAP recommendations for well child care were originally based on consensus expert opinion and more than three decades later documentation of effectiveness remained unavailable This information gap led policymakers to question the value of well child care and limited incentive to correct its underuse Only in the last five years have experimental findings indicated an association between well child care and both more cost efficient health care and increased school readiness Awareness of these findings by insurance company and Medicaid administrators is limited The purpose for this book is to increase awareness by all stakeholders of the empirically determined clinical effectiveness of well child care The short term goal is to facilitate increased utilization of well child care with a longer term goal of improved child health and life success
