3116-10 Westell DSL Network Interface Unit with Performance Monitoring

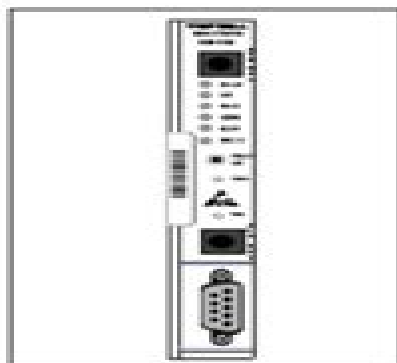

Figure 1. Front View of 3116-10 Module

1. GENERAL

1.1 Document Purpose

This document provides basic installation instructions for the Westell 3116-10 Network Interface Unit (NIU) with Performance Monitoring (PM), shown in Figure 1. Call the telephone number shown in Paragraph 3.1 for request literature #000-101522 for additional information about the 3116-10, including remote provisioning features.

1.1.1 NOTE:

Read the 3116-10 and PM Network Interface Unit with Performance Monitoring user's manual on the 3116-10-001 or 3116-10-002.

1.2 Document Status

Whenever this document is updated, the reason will be stated in this paragraph. The latest B equipment revision compatibility and PM coverage from 7 to 90 days. The Revision B document replaces Figure 1.

1.3 Product Purpose and Description

The 3116-10 serves as an interface between a T1 span, or customer premises-based fiber multiplexer, and the extra-building Customer Premises Equipment (CPE). The 3116-10 provides standard maintenance loopback plus collecting and reporting DSL performance statistics. These performance monitoring capabilities allow service providers to "PROTECT" their "PROFIT" against facility performance degradation, thereby improving the availability of Hi-Cap T1 circuits. The NIU provides a front panel that is half the width of the standard 400-wire NIU and makes electrical connections to the Facility and CPE sides of the circuit through a 50-pin serial edge connector of the mounting assembly, using industry-standard pin assignments.

1.4 Product Monitoring

The NIU is a 300-MEDIANET[®] type module and mounts in a 20U or 40U-type shelf assembly which is usually mounted on an equipment rackboard at the customer location, after the building entrance terminal and primary protection. Westell offers both single- and multiple-site monitoring available in both local-based (local) and rack-mount versions for NIUs. In some applications, it may be desirable to allocate the NIU to outside plant cabinets or enclosures. The NIU is fully capable for operating over the temperature range of 0 to 70°C.

2.1.4 MAIN LSP Push Button Switch

The NIU loopback state can be controlled by pressing the front panel MAIN LSP push button. Depressing of the MAIN LSP push button will cycle through the loopback states.

- If depressed for 1 to 5 seconds, the LSP LED will be on solid (yellow). If released in this interval, the Network Loopback will be activated.
- If depressed for greater than 5 seconds, the LSP LED will begin blinking (yellow) at approximately 1 time per second. If released during this 5-second period, all existing loopback conditions will be deactivated.
- When first depressed, the LSP LED will go off and remain off during the first 3 seconds that the MAIN LSP is depressed. If released during this 3-second period, all existing loopback conditions will be deactivated.

2.1.5 DB-9 RS-232 Connector

A DB-9 RS-232 connector (Figure 2) is provided for each terminal access for setup, maintenance, performance, performance information retrieval, and event troubleshooting (see Paragraph 3.1.1 for set-up instructions).

3. PCB Side Panel Features

3.1 Option P200 - Power Source

The 3116-10 contains one hardware option, P200, which configures the unit power and which must be set on the unit or manually installed. Select either "SPNC" or "LOCAL" power, as required by the

application. This flexible powering option, shown in Figure 3, allows the unit to operate either directly from T1 signaling spans or from a locally provided 20 to 50Vdc source. When locally powered, the DC source can be negative or positive ground referenced. This allows the unit to operate from conventional 48Vdc sources as well as the +24Vdc source found in certain wireless/PCS applications.

3. INSTALLATION

The 200-type 3116-10 module installs in either a 20U or 40U-type mounting or shelf assembly, as described in Paragraph 1.4. The 3116-10 should be installed according to local company practices. However, all units must be installed as described in the following steps:

- Follow Safety and ESD Precautions. Use standard proper safety and Electro-Static Discharge precautions and procedures before installation and whenever handling the module.

- Unpack and inspect. Openly inspect the module and visually inspect it for damage (impact-damages to the shipping company and/or Westell).

as it will go, using just enough effort to fully-seat the edge connector for maximum electrical contact.

CAUTION: Do not use force when handling and inserting modules. Do not force a module into place. If a module is inserted, remove it and check the alignment. If the module is not aligned, do not force it into place. If the module is not aligned, do not force it into place. If the module is not aligned, do not force it into place.

Perform Installer Connections. The 3116-10 makes electrical connection to external equipment through a 50-pin, serial edge connector in the mounting assembly (see Figure 3 and Figure 4). No installer connections are necessary once the module is properly inserted into the shelf assembly. See Table 2 for the NIU pin-out designations.
